

**Do you have a DPF problem? We can help.**

**HENDRY AND MACDONALD MOTOR ENGINEERS** offer a Diesel Engine cleaning service using the acclaimed industry leading Forté Power-Clean system from as little as £240.

Our DPF cleaning solution does not require dismantling of the exhaust to clean the filter, but is instead performed in situ.

If our service is unsuccessful, there will be no charge. Simply apply code **FORTE04** when booking to qualify for this offer.

Please contact our general office number with any enquiries.

Forté Power-Clean allows direct cleaning of a vehicle's problem area with new specially formulated treatments, gaining effective results and saving drivers time and money.

#### **Fuel Injection**

Allows direct cleaning of the fuel injectors, intake valves (indirect injection) and the combustion chamber with a highly concentrated cleaning solution without the need to remove injectors or dismantle the engine.

#### **Diesel Turbo**

A highly effective treatment to clean turbine and variable geometry vanes of diesel turbochargers without dismantling. The treatment is injected directly into the combustion chamber to gain effective results.

#### **Air Intake**

A special tool injects the strong cleaner directly into the air-intake to remove contamination from the inlet manifold and inlet valves without dismantling (also highly effective on EGR Valves depending on location).

#### **DPF**

Cleans and flushes out soot, ash and other contamination from blocked DPFs, restoring their original operation without the need to remove the DPF from the vehicle.
